

Dear Angelo

My wife and I are very pleased with the concrete sidewalk that Midas construction recently finished around our house. We realize that the job was not easy, because it involved working around our gardens and a very large tree. Right from the start, we were impressed by your very clear and professional outline of what would need to be done. You showed how we could get rid of a dangerous step in the sidewalk. You were able to tell us which elements of the job were definite, and which elements would have to be decided when the work was being done. There were no surprises about how the work would proceed.

When the crew arrived, they were fast and efficient. Any mistakes were addressed instantly. We noted that old concrete was removed cleanly and tidily. Framing was done quickly and efficiently, and the framer paid attention to saving the roots on that huge tree. I asked to have a small conduit installed under the sidewalk before the concrete was poured; not a problem; done and done! The final concrete is smooth and drains beautifully.

Your crew showed us the decay in part of our front steps, and your carpenter did a great job replacing the pillars in cedar and treated wood.

We think our front yard looks the way it should and reflects well on our 100-year-old house.

We will definitely call on you and your firm again.

Dave Camm
